

[Dinner] [Current Balance] The difference between reimbursement and the price of selected meal is added

Preconditions: the cost of selected meal for that day must be less than 20€ (reimbursement)

Steps to Reproduce:

1. Open the Dinner Application
2. Select any day in "Order for" field and any "Location"
3. Select few option from the meal in the menu (not the full menu)
4. Make sure the "Total" of selected meal is less than 20€
5. Press "Order" button and pay attention to the "Current Balance"
6. Repeat for each Day in each Location

The Verdict- Actual Result: The system adds the different € calculated between the reimbursement and the cost of the selected meal to the "Current Balance" of the user, when the selected meal costs less than 20 euro. Instead of not charging and not adding anything.

Environment: Window11, Laptop, Google Chrome

Severity: Blocker

Priority: High

Expected result:

When a meal of a value less than 20€ is selected from the menu in one day in only one Location (canteen) , the system will NOT add any amount of € to the "Current balance" of the user, nor will it charge any amount either.
